**DETAILED ACTION**

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Specification***

2. The abstract of the disclosure is objected to because of the reasons below.

Correction is required. See MPEP § 608.01(b).

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claim 9 recites the limitation "said master module" on line 4. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2642

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claim 9, as best understood, is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Dickman et al. (Dickman; U.S. Patent No. 5,323,452; cited and applied for the first time) or Boyle, III et al. (Boyle, U.S. Patent No. 5,717,747; cited and applied for the first time).

Dickman plainly teaches adding a new call-processing module dynamically to a service call management system where the module reads on the nodes of Dickman and the identifier reads on the node name.

Boyle also plainly teaches adding a new call-processing module dynamically to a service call management system where the module reads on the new calling features of Boyle and the identifier reads on the feature name.

***Allowable Subject Matter***

9. Claims 1-9 are allowed over the prior art of record.

***Conclusion***

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Mercouroff et al. teach call processing using CORBA specifications.
